External Swage Notched Stems and Ferrules

- 316 stainless steel stem with wrench flat
- 304 stainless steel ferrule
- Can be swaged-on or crimped-on; *consult factory for specifications on swaging and crimping procedures.*
For hose outside diameters of 2-4/64" and below, couplings can only be crimped.
For hose outside diameters of 2-5/64" and above, couplings can be crimped or swaged.
- This stem can be removed from a damaged hose by cutting away the ferrule, without necessarily damaging the fitting. *After inspection to determine its suitability for reuse, it can be reinstalled into another hose by using a **new ferrule**.*
- You can now stock one nipple and two ferrules, and thereby cover the same hose range with less inventory. *You must purchase a fitting and the matching ferrule to create an assembly.* **SAFETY ALERT**
- See pages 32-35 for cam and groove style notched fittings and pages 220 and 460 for turned back style notched fittings.
