

Gauges

Dixon Sanitary continues expansion of its quality product line, offering the best sanitary gauge in a variety of styles.

All Dixon Sanitary gauges feature the PowerFlex™ movement which addresses performance problems. Its unique suspended construction isolates the gauge movement from the socket, which is the normal travel path for shock and vibration. The Bourdon tube and the linkware cushion the movement under stress conditions, reducing wear on the silicone lubricated segment and pinion surfaces. The result of the design is superior gauge performance and extended gauge life.

Bradford™ quality: maintaining the **A₃** standard

The Sanitary Standards were originally created by the dairy industry as a voluntary benchmark for sanitary safety. The standards are still developed collaboratively by a group of processors, suppliers, and sanitation specialists.

Q Dixon Sanitary has earned the 3A symbol through the Third Party Verification (TPV) program, which requires a professional assessment rather than voluntary compliance to make certain each product conforms in all respects to the published standard. The standards are accepted by the USDA and USFDA.

Bradford™ gauges meet 3A Sanitary Standards for Gauges for Milk and Milk Products, Number 74-00 (Authorization 640). See the Dixon Sanitary website, [www.dixon.com](#), to download a PDF of the certificate or call Dixon Sanitary.

Dixon Sanitary is proud to be a participant in the 3A TPV program.
