

Vacuum Relief Valves

Vacuum relief valves are safety valves which relieve vacuum (instead of pressure) when exceeding a specific setting. Customers must advise vacuum setting required when ordering - typical setting 10-18 inches of mercury.

Construction:

- Aluminum top
- Anti-galling alloy inlets
- Bronze valve
- Stainless steel spring
- Male inlets / female outlets

Part #	Size
1120/xx	1½"
2120/xx	2"
3120/xx	3"

/xx refers to the choice of pressure settings provided. Customer needs to request the required settings when ordering.

PVC Coated Laynards

Part #	Description
CAL15	15" long PVC coated carbon steel with aluminum crimp sleeves. One end factory crimped, one end uncrimped for field installation.
CAL25	25" long PVC coated carbon steel with aluminum crimp sleeves. One end factory crimped, one end uncrimped for field installation.
