

# GUNN PATTERNS

## Retroreflectivity

3M Scotchlite™ reflective material is the most distinguishing characteristic for our Luminator™ hand protection. These styles are ANSI/ISEA 107-2004, Level II compliant for retroreflective performance. Retroreflection occurs when light rays are returned in the direction from which they came. The "level" refers to the amount of reflectivity for the material. Reflective garments may meet a "class" rating which refers to the amount of reflective material per garment.
