

**BEE VALVE INC.**

**Fluid Handling Components**

## **Welcome to Bee Valve!**

Bee Valve Inc. traces its origin back a half-a-century to the beginning of the modern plastics industry. The company was on the developmental forefront of plastic ball valves and was one of the first companies to use glass-reinforced polypropylene for this application.

The company was also on the leading edge in the development of non-metallic hose couplers and adapters in the early 1970s, utilizing glass-reinforced nylon and polypropylene for economy and strength.

Bee Valve continues to focus on providing the industry with state-of-the-art materials and components. When you turn to Bee Valve for your fluid handling needs, you're turning to the market innovator.
