CLUTCH TUNING ISSUES WHICH CAN LEAD TO PERFORMANCE LOSS INCLUDE THE FOLLOWING

Premature Belt Failure:

- Drive is not aligned properly
- Pulleys need to be cleaned or replaced
- Pulleys are not adjusted correctly for the belt

Slow Acceleration:

- Secondary pulley gearing is not completed
- Belt width has been reduced by wear
- Sides of the belt are excessively worn
- Pulleys and/or center length need to be readjusted to match the belt
- Pulleys need to be cleaned or replaced

Excessive Vibration:

- Pulleys need to be re-tightened or re-set on shafts
- Pulley components should be checked for wear
- Belt may have acquired spotted burns on the sidewall

Engine RPM is too high through hard acceleration:

- Pulleys and/or center length need to be readjusted to match the belt
- Belt is too narrow
- Pulleys need to be cleaned or replaced

Clutch engages too late, too soon, or in a sporadic manner:

- Pulleys and/or center length need to be readjusted to match the belt
- Belt is too narrow
- Pulleys need to be cleaned or replaced

Incorrect Downshifting:

- Secondary/Belt Pulley is not tuned correctly
- Pulleys need to be cleaned or replaced
