# Thermoid®... Industrial Rubber Bands for Material Handling Applications!

## BIG JOB® FURNITURE BANDS

Save time and money, protect your quality furniture shipments and reduce repair work effort by using our furniture rubber band products. These bands are designed to fit chairs, king size sofas, and everything in between.

They're easy to work with in a variety of applications, including securing padding over finished wooden parts, holding glued parts or upholstery in place while fastening and holding flounces during manufacture or shipping.

## BIG JOB® FLOUNCE SAVER BANDS AND SPRING LINK BANDS

Flounce saver bands are exceptionally easy and convenient to apply or move. They'll hold flounces up while holding plastic bags on to protect the entire piece and save application time, too. Big Job Flounce savers keep your professional job looking professional during manufacture and shipping.

SPRING LINK BANDS replace metal clips in serpentine spring construction. They silence serpentine springs and keep them in perfect alignment, maintaining the quality you build into your furniture.

## Thermoid® EPDM Bands

Longlife EPDM Bands have the same qualities as natural rubber bands, however they have the added benefits of longer life and broader usage. These EPDM rubber bands have numerous applications including holding assemblies together during cleaning, moving or storage in manufacturing areas, spring link bands for serpentine spring construction, holding ski boot racks and more. Designed to resist the effects of extreme weather, most chemicals, humidity and severe temperatures (use effectively in temperatures ranging from -60°F to +300°F), you can rely on these rubber bands to hold and keep holding.

## Thermoid® NURSERY/GRAFTING BUDDING STRIPS

Tree grafting is now a lot easier with our budding strips and you can reduce your normal grafting time by half. Just graft, wrap, tie and you're done.

Our budding strips provide easy application, just wrap, twist and finish. They hold the bud union gently and firmly in place while preventing air moisture seepage. Budding strips are 100% natural rubber so using them creates no environmental concerns. An even bigger plus to their use is removal is not required. The strips disintegrate after the graft is secure. The strips can be sized to your grafting needs and they are available in various widths, thicknesses and lengths: 4 to 8 inches.

## Thermoid® GOOCH TUBING

Our tan rubber band gooch tubing is available in a variety of sizes and thicknesses. This product can be used in any number of industrial applications. Gooch tubing comes standard in 5 foot lengths, but it can be made in longer lengths.

### TUBE SIZES
